

Donning Non-Sterile Gloves

1 Take the first glove from glove box

2 Touch only the edge of the cuff

3 Insert the opposite hand being careful to avoid damage with nails

4 Take a second glove with the the bare hand

5 Avoid touching the forearm of the ungloved hand by folding the cuff edge over and pulling on with gloved hand

6 Once gloved, touch only the procedure site and required instruments

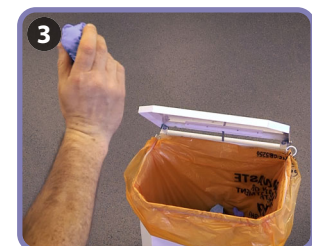

Removing Gloves

1 Pinch one glove at wrist level without touching the skin, pull away allowing the glove to turn inside out

2 Hold the empty glove in the gloved hand. Slide your bare fingers between the skin and wrist of the remaining glove. Pinch and roll the second glove down over the first

3 Discard gloves in clinical waste
