

## Class Activity – Scavenger Hunt

It's time to get out and explore the food systems around you! See how many of these ten items you can find and add to the Padlet board (link on topic page). This might make a good exercise to carry out with a class - you can then make a display of the objects they find.

1. A food product that has a label associated with sustainability
2. An antimicrobial drug
3. An insect pollinator
4. Food packaging litter
5. Food being grown
6. Food from the other side of the world from where you live
7. Food packaging with information about diet and health
8. A large quantity of food being transported
9. A local media story about food safety
10. A farmer!
